CRYSTAL POPPER

Your lure can be turned into a school of whitebait fishes by using light diffusion through membrane character of CRYSTAL POPPER.

Every angler want to cast a lure into a school in the distance and want to use the smallest lure possible. Solid resin and Sinking body can finally give the solution to these two propositions. The body structure of this CRYSTAL POPPER can make the light diffuse in the water and it looks like a school of whitebait fishes. There is no weights inserted and it has have a good swimming action, however, the weight is 5.3g(55mm) heavy enough to have a great casting distance.
